

Introducing **EZPAY SOLD!**

In the tradition of creating market leading products such as **EZPAY Advantage**, our highly successful deferred payment program which enables merchants to offer their customers competitive financing options over 3, 6, and 12 month payment terms, and with our goal of continuing to refine and enhance our product offering, we are pleased to announce the immediate release of **EZPAY SOLD!** a “**Secure On-Line Device**” that is a tablet* based application using the Android™ operating system to quickly and easily authorize and process **EZPAY Advantage** transactions.

The **EZPAY SOLD!** platform eliminates the need for a large point of sale terminal and imager tied to limited counter space. **EZPAY SOLD!** is wireless so it can be used anywhere— at the front counter, customer waiting area, service bay, or anywhere inside or outside a WI-FI enabled business to help close an important sale. The platform is easy-to-use with voice prompts that guide the merchant through the authorization process. The capabilities of the tablet's rear facing camera allow for capture of photo ID information (name, address, etc.) as well as the image of the down payment check. It's as easy as Point and Click.

And by using **EZPAY SOLD!** there is no longer the need to maintain a separate supply of consumer agreements! All information compiled in the entry process automatically fills out an internally stored template of the agreement! The consumer and merchant each simply sign their respective names on the tablet display screen when prompted, and instantly a copy of the Agreement, with signatures included, is emailed and/or texted directly to both the consumer and merchant!

Now is the time to get **SOLD!**

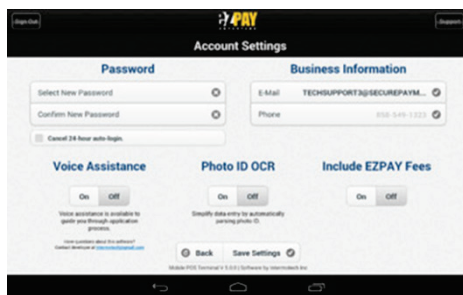

*Note: Not all Android™ tablet models are supported — minimum operating system and camera resolution requirements apply
